📍 Pune, Maharashtra

Education

**Bachelor of Technology
(B.Tech) — Computer Science
(AI & Data Science)
at Pune Institute of
Computer Technology, Pune,
Maharashtra**

Aug 2024 - May 2028

Highlights: Consistently strong academic performance; hands-on work in applied ML and LLM-based applications. Coursework includes Data Structures & Algorithms, Machine Learning, Deep Learning, Databases, and Cloud Computing. Activities: technical workshops, project demos, and peer learning sessions.

**High School Diploma at Delhi
Public School**

Mar 2022 - Mar 2024

Highlights:- Debate competition winner with strong communication and analytical skills; recognized for technical curiosity and active participation in sports and extracurricular activities.

Skills

Python

FastAPI

Machine Learning

Profile

Aspiring Computer Science major interested in Artificial Intelligence and Backend Engineering, highly skilled in Python programming and has experience in creating scalable software applications. Has expertise in backend development, RESTful APIs, databases, automation, and full stack development. Has worked on various projects that have used artificial intelligence, processed data and deployed them using cloud technologies. Has solid knowledge of algorithms and software engineering, and is highly motivated towards building robust applications that can address practical problems

PROJECTS

RAG Knowledge Base(Backend)

- Developed a full-stack RAG platform enabling users to upload PDFs and query documents using natural language through LLM-powered semantic search.
- Built a FastAPI backend integrating vector embeddings, document chunking, and similarity search using ChromaDB for context-aware retrieval.
- Implemented conversational memory, citation generation, and secure document management to improve answer accuracy and user experience.

H.U.M.A.N.E (AI)

- Developed a real-time multimodal AI assistant integrating speech, image, and sentiment analysis for context-aware interactions.
- Built a Python backend with WebSocket-based communication, conversation memory, safety guardrails, and emotion-aware response generation.
- Integrated AI pipelines for voice transcription, prompt processing, image understanding, and adaptive text-to-speech.

Multi-Agentic Interview Companion (AI Agents)

- Designed an AI-powered multilingual interview simulator using LLMs, emotion detection, and agent-based evaluation systems.
- Implemented automated question generation, real-time candidate assessment, performance scoring, and PDF report generation.
- Built a full-stack solution using Python, Flask, SQLite, DeepFace, and local LLM inference through Ollama.

SentinelAI Self-Healing Monitoring System (AI + Backend)

- Engineered an AIOps platform that monitors infrastructure metrics, detects anomalies using machine learning, and performs automated remediation.
- Integrated Prometheus, Node Exporter, Process Exporter, and Isolation Forest-based anomaly detection for real-time system analysis.
- Developed root-cause analysis, severity scoring, process attribution, and self-healing workflows with a Flask-based monitoring dashboard.

- RAG (Retrieval-Augmented Generation)
- API Integration
- AWS (EC2, S3, IAM)
- Docker
- SQL (PostgreSQL)
- TypeScript + React
- Large Language Models (LLMs)
- Git & GitHub

Languages

- English
- Hindi
- German

Hobbies

- Chess
- Fitness
- Reading (AI/ML Papers)
- Building Side Projects

SecureScan Upload System (Backend/Security)

- Built a secure file-upload platform with real-time malware scanning using ClamAV and automated security reporting.
- Developed a multi-language architecture using PHP, Python, JavaScript, and C to validate uploads and detect malicious files.
- Implemented automated email notifications and modular security workflows for safe file handling and threat detection.
